

Current Mitigation Techniques: Balancing Costs with Benefits

Charles Newcomb

National Renewable Energy Laboratory

June 2011

Balancing Mitigation Costs

Comparative Generation Costs

Baseline Development Costs

Discussion

- The meeting is without prejudice. To encourage open, honest, and creative dialogue in the best spirit of debate, all participants agree that views and statements made in the meeting will not be used in any way to discredit, defame, or attack them in or after the meeting.
- Participants will communicate with mutual respect, and agree to discuss civilly. Only one person will speak at a time as called upon by the facilitator. Participants will refrain from personal attacks. Each person will express his or her own views and seek understanding rather than speaking for others and not attribute motives to others.
- Participants should do their best to distinguish facts and evidence from opinion when they speak.
- Everyone comes with preconceived notions, but all should be prepared to observe and to listen more than speak. Each person is encouraged to generate options and ideas without commitment.
- Each person will seek to identify areas of common ground where possible, without glossing over or minimizing legitimate disagreements.
